WATERWAYS**

N 
NUCLEAR WASTE

A Deep
Geological
Repository is
an unproven
experiment
that puts our
water at risk

NEW MEXICO

- Low/Intermediate waste
- Middle of the desert
- Dry
- Closest town is 35km away
- 10,240 acres as a controlled safety zone

SOUTH BRUCE

- High level waste
- Prime agricultural land
- The river flows through it, swamps and seasonal flooding
- Closest town is 3 km away
- No buffer zone

6-7 Status of Storage, Disposal & Transportation Containers for the Management of Used Nuclear Fuel

“When the containers eventually fail by corrosion as a result of ground water ingress into the repository, waste constituents can migrate out of the disposal facility and enter the biosphere.”

What happens if the water is
contaminated?

In the Great Lakes Basin?

Are you willing to risk the
Great Lakes and affect the
drinking water of 40 million
people?

Is this experiment worth the risk?
